

## CONNECTOR FOR MYSAP.COM™

The Connector for mySAP.com Esker DeliveryWare Platform helps organisations meet the challenges of reducing costs and improving profitability through e-business strategies. The Connector for mySAP.com seamlessly integrates Esker DeliveryWare into SAP® R/3 or mySAP environments, adding value to SAP solutions by enabling automated document delivery for streamlined supply chain communication and shorter business transaction cycle times.

### CREATING ADDED VALUE WITH ESKER DELIVERYWARE AND SAP

In any environment where SAP solutions provide information and process management, Esker DeliveryWare adds value by automating the handling of business-critical documents.

Esker DeliveryWare helps organisations achieve higher return on SAP investments by addressing key business issues such as:

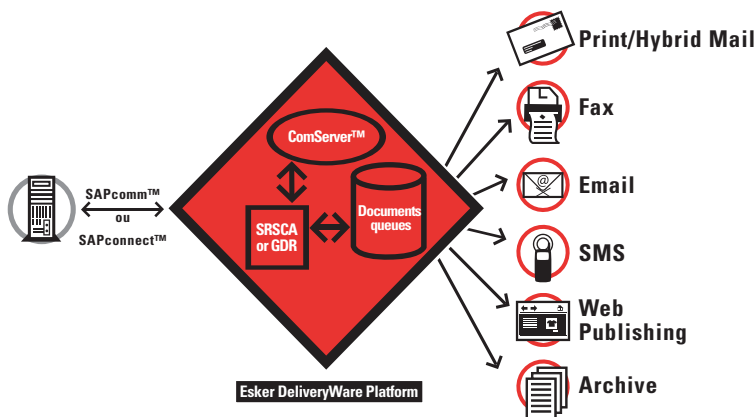

- ◆ Improving cash flow through order processing and sales administration. Esker DeliveryWare helps reduce accounts receivable turnaround time to shorten collection cycles and accelerate cash conversion.
- ◆ Streamlining procurement processes to help reduce purchasing and inventory carrying costs. Esker DeliveryWare automates requisitioning for more efficient purchasing of materials, goods and services.
- ◆ Lowering costs associated with manual processing and distribution of business documents: paper, printing, mailing, postal and fax equipment, on-going maintenance and staff productivity.

Esker DeliveryWare Platform supports and enhances SAP solutions by distributing inter and intra-office documents.

Documents can be routed to users, directly to SAP application modules, or archived for later use.

#### TIGHT INTEGRATION

Offering a practical and non-intrusive solution for the integration of automated document delivery, Esker DeliveryWare resides on a server and connects to the SAP R/3 or mySAP platform as an independent device.

This architecture offers significant advantages:

- ◆ No mySAP programming changes are required.
- ◆ Esker DeliveryWare supports both SAPcomm and SAPconnect architectures, enabling direct access from any mySAP application module.
- ◆ Esker DeliveryWare integrates seamlessly and delivers full document delivery capability in SAP environments. It can independently link to mail servers, business applications, networks, and multiple hosts. Because Esker DeliveryWare can communicate to the enterprise either through or independently of SAP, it offers unique flexibility for heterogeneous systems.

#### EASY FOR THE USER

Sending, viewing, and managing documents with Esker DeliveryWare is easy for SAP users, who access Esker DeliveryWare from within their familiar desktop interfaces. There is no training required and no delay enabling delivery throughout the enterprise.

The SAP interface manages status notifications sent back to the SAP system. Esker DeliveryWare's PCL5e and PostScript converters ensure preservation of the original documents' sharp fonts and clear graphics.

#### FLEXIBILITY FOR THE ADMINISTRATOR

By using SAP Output Determination, administrators can configure Esker DeliveryWare as the default output device if required. In addition, administrators can configure notification parameters and SAP spool support, and set automatic addressing to specify that certain recipients always receive documents via preferred methods.

#### SYSTEM REQUIREMENTS

- ◆ SAP R/3™ V2.x or higher (using SAPcomm).
- ◆ SAP R/3 V3.1H or higher (using SAPcomm or SAPconnect).
- ◆ TCP/IP connection to the mySAP or SAP R/3 server.
