

CONNECTOR FOR MYSAP.COM™

With Connector for mySAP.com, Esker Fax helps organisations meet the challenges of reducing costs and improving profitability through e-business strategies. Connector for mySAP.com seamlessly integrates Esker Fax into SAP® R/3 or mySAP.com environments, adding value to SAP solutions by enabling automated document delivery for streamlined supply chain communication and shorter business transaction cycle times.

CREATING ADDED VALUE WITH ESKER FAX AND SAP

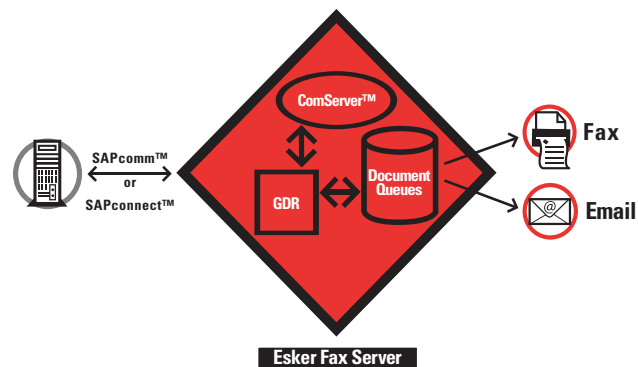

In any environment where SAP solutions provide information and process management, Esker Fax adds value by automating the handling of business-critical documents. Esker Fax helps organisations achieve higher return on SAP investments by addressing key business issues such as:

- ◆ Improving cash flow through order processing and sales administration. Esker Fax helps reduce accounts receivable turnaround time to shorten collection cycles and accelerate cash conversion.
- ◆ Streamlining procurement processes to help reduce purchasing and inventory carrying costs. Esker Fax automates requisitioning for more efficient purchasing of materials, goods and services.
- ◆ Lowering costs associated with manual processing and distribution of business documents: paper, printing, mailing, postal and fax equipment, on-going maintenance and staff productivity.

Esker Fax supports and enhances SAP solutions by distributing inter- and intra-office documents. Documents can be routed to users, directly to SAP application modules, or archived for later use.

TIGHT INTEGRATION

Offering a practical and non-intrusive solution for integration of automated document delivery, Esker Fax resides on a server and connects to the SAP

R/3 or mySAP.com platform as an independent device. This architecture offers significant advantages:

- ◆ No SAP programming changes are required.
- ◆ Esker Fax supports both SAPcomm and SAPconnect architectures, enabling direct access from any SAP application module.
- ◆ Esker Fax integrates seamlessly and delivers full document delivery capability in SAP environments. It can independently link to mail servers, business applications, networks, and multiple hosts. Because Esker Fax can communicate to the enterprise either through or independently of SAP, it offers unique flexibility for heterogeneous systems.

EASE FOR THE USER

Sending, viewing and managing documents with Esker Fax is easy for SAP users, who access Esker Fax from within their familiar desktop interfaces. There is no training required and no delay enabling delivery throughout the enterprise. The SAP interface manages status notifications sent back to the SAP

system. Esker Fax's PCL5e and PostScript converters ensure preservation of the original documents' sharp fonts and clear graphics.

FLEXIBILITY FOR THE ADMINISTRATOR

Using SAP Output Determination, administrators can configure Esker Fax as the default output device if required. In addition, administrators can configure notification parameters and SAP spool support, and set automatic addressing to specify that certain recipients always receive documents via preferred methods.

SYSTEM REQUIREMENTS

- ◆ SAP R/3™ V2.x or higher (using SAPcomm)
- ◆ SAP R/3 V3.1H or higher (using SAPcomm or SAPconnect)
- ◆ mySAP.com
- ◆ TCP/IP connection to the SAP R/3 or mySAP.com server
